

Pollux – Calibration Unit

CM LUVOIR - Pollux
Paris
04th April 2017

R. Desselle, E. Renotte (CSL)
Ioannis Argyriou, P. Royer (KUL)

Belgian Contribution

Partnership CSL (ULg), KUL

CSL : design, development, MAI&T of the flight hardware

KUL : ground-based characterisation of the Calibration Unit
EGSE, software and ground calibrations

KU LEUVEN

Calibration Unit

Provide the necessary stimuli for in-flight calibration

- Sources
 - Spectrum, Brightness, Lifetime, TRL, ...
- Injection points
 - Right before the polarimeter
 - Representative
- Mechanisms & mixers
 - One injection point
 - Several sources / calibration item
- Interplay with operational concept

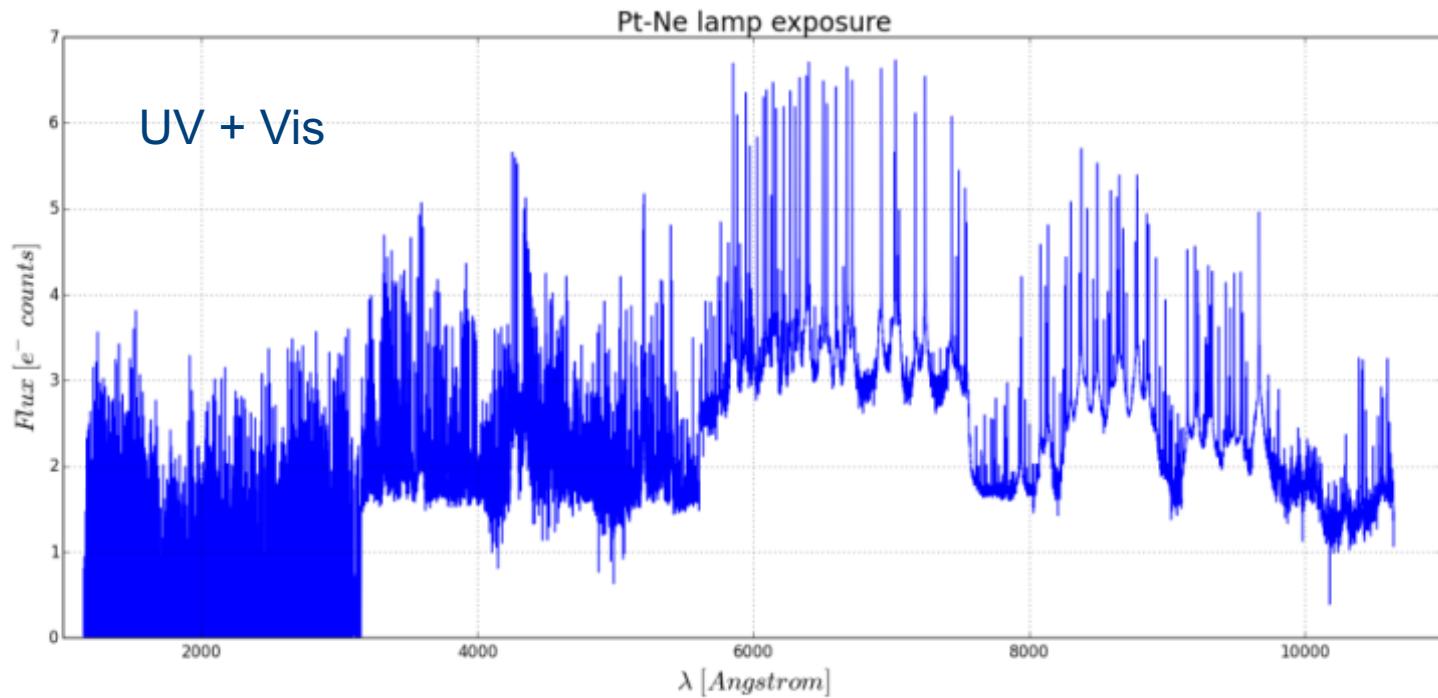

Calibration Items

- **Bias**
- **Dark** → Shutter or ‘dark source’
- **PRNU** → flat
- **Blaze & cross-order profile** → flat
- **Linearity** → ground & flat
- **RSRF** → ground / celestial
- **ASRF** : TBD
- **IPRNU** → ground
- ...

Calibration Items

- **Wavelength** $\rightarrow \lambda_{cal}$ Source
 \rightarrow monitor, or acquire w/ spectra

Calibration Items

- **Instrumental Polarisation**

$$\mathbf{S} = [I, Q, U, V]^T$$

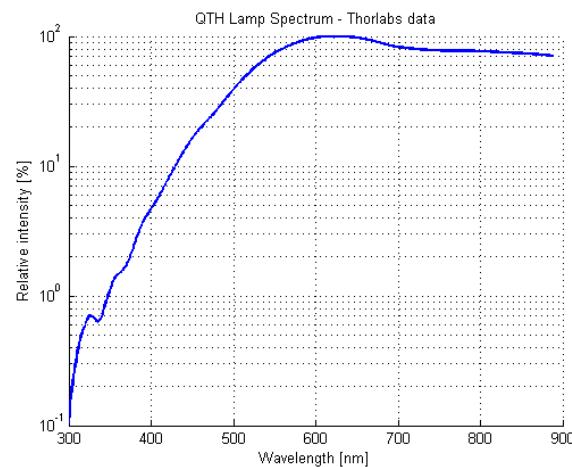

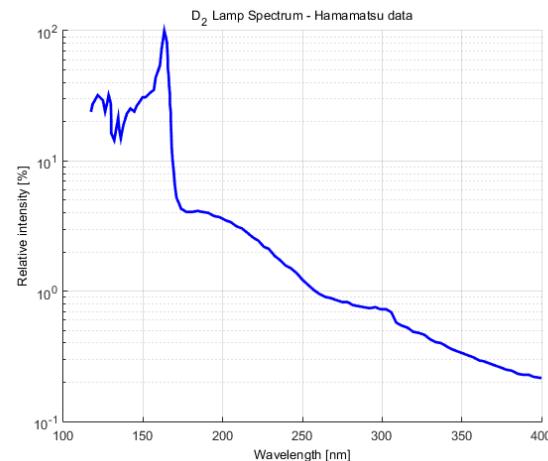

$$\mathbf{S}_{\text{out}} = \mathbf{M} \times \mathbf{S}_{\text{in}}$$

$$\mathbf{M}(\lambda, \theta) = \begin{pmatrix} I \rightarrow I & \dots & V \rightarrow I \\ I \rightarrow V & \dots & V \rightarrow V \end{pmatrix}$$

- Ground calibration
- Aging in space → celestial targets

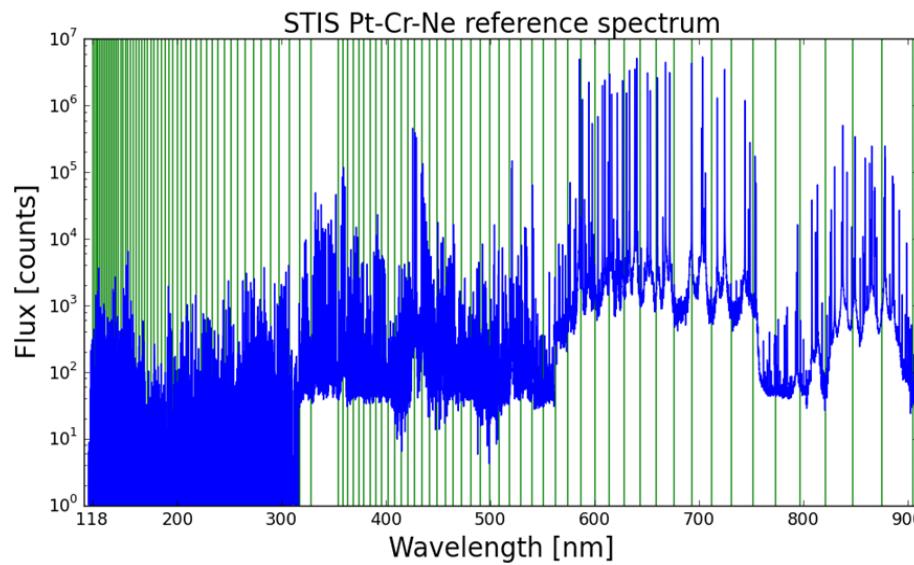

Flat Field Sources

- UV domain: Deuterium D_2 lamp
 - High emission intensity from 120 nm to 400 nm
 - Lifetime around 2000 hours
 - Space heritage
- VIS & NIR: Quartz Tungsten Halogen QTH lamp
 - High emission intensity from 300 nm to 900 nm
 - Lifetime around 2000 hours
 - Space heritage
- Minimum of emission between 300 nm and 500 nm for both type of lamps

Spectral Source

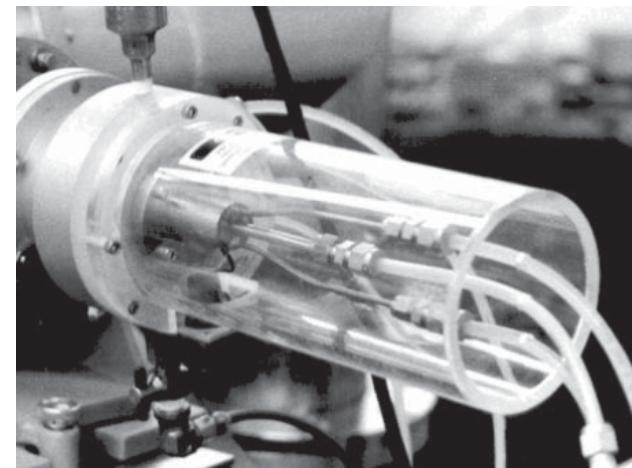

- Pt-Cr-Ne HCL
 - Heritage from STIS and COS (HST)
- High number of spectral lines in the UV
- Aging with usage & with time

Far UV

Windowless HCL

Old tech, (n)ever flown ?

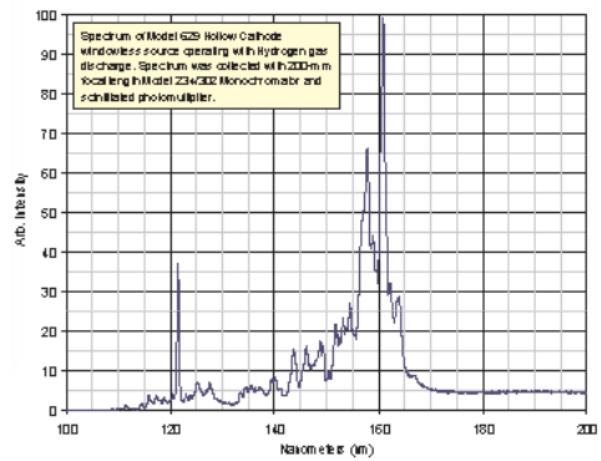

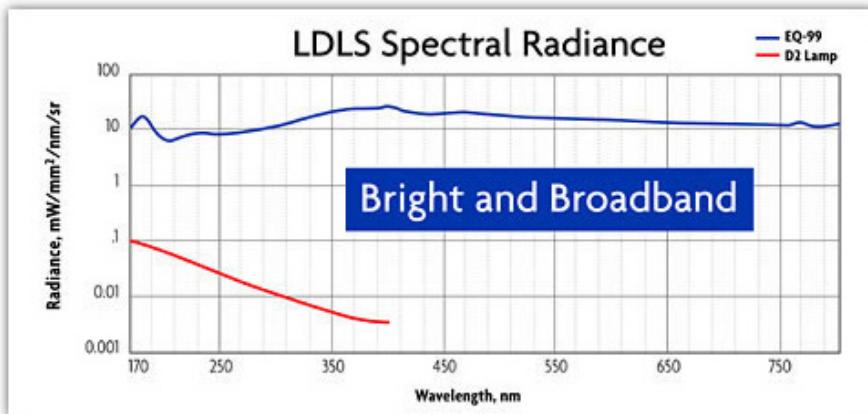

LDLS

New tech

Vacuum

Windowless – FUV

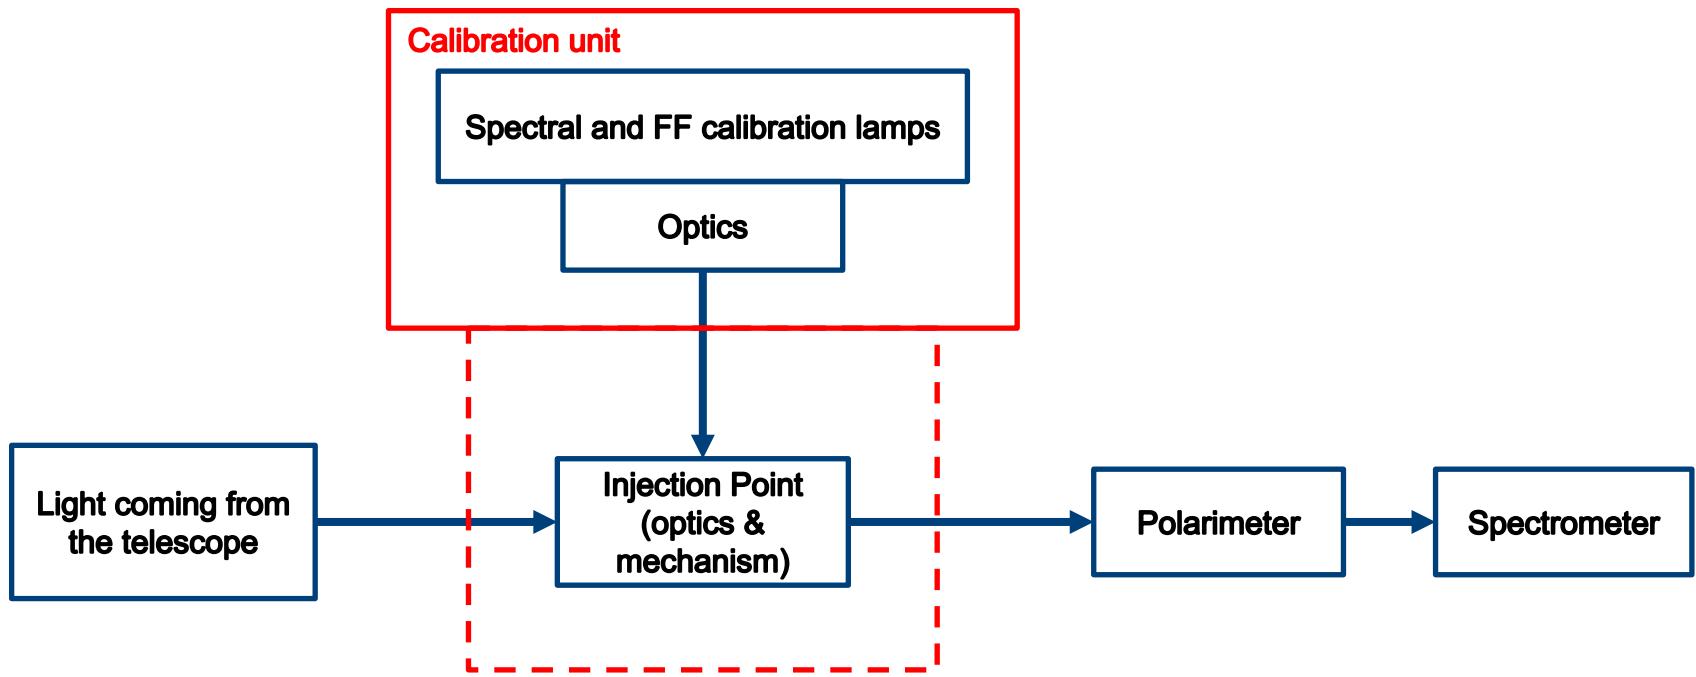

KU LEUVEN

Far UV

Possible sources:

White Dwarfs
